FOREWORD

This is the fifth in a series of reports published by the Department of Water Resources and its predecessors under cooperative agreement between the Kaweah Delta Water Conservation District, Kaweah River Association, St. Johns River Association, and the State of California.

The first report entitled Bulletin No. 49, "Kaweah River, Flows, Diversions, and Service Areas", was published in 1940, and presented all data available through September 30, 1939, covering some 22 years of record. Subsequent bulletins have been published at 5-year intervals through September 30, 1960, as 49A, 49B, and 49C. All of the bulletins were entitled the same as Bulletin No. 49.

Terminus Dam was dedicated as completed in May 1962, at which time an interim contract between the U. S. Corps of Engineers and downstream interests was initiated for storage in Terminus Reservoir which changed the delivery schedules of Kaweah River water.

The Department of Water Resources entered into Cooperative Agreement No. 161535 on January 13, 1975, with the Kaweah Delta Water Conservation District, Kaweah River Association, and the St. Johns River Association to compile and publish this bulletin entitled Bulletin No. 49D, "Kaweah River, Flows, Diversions, and Storage", which presents data for the period October 1, 1960, through September 30, 1970. (A copy of Agreement No. 161535 is presented on the following page.)

Ronald B. Robie, Director
Department of Water Resources

AGREEMENT FOR PUBLICATION OF
KAWEAH RIVER STREAMFLOW AND DIVERSION RECORDS

THIS AGREEMENT, made and entered into by and between the Kaweah Delta Water Conservation District, the Kaweah River Association, and the St. Johns River Association, hereinafter referred to as the "Agencies", and the State of California, acting by and through the Department of Water Resources, hereinafter referred to as the "State",

WITNESSETH:

WHEREAS, for the past fourteen (14) years measurements of streamflow of Kaweah River, and of the diversions and distributions of water therefrom have been made and recorded by local organizations served thereby and interested therein; and

WHEREAS, compiling, editing, and printing these records and other pertinent streamflow data in the form of an official publication of the State is desirable and advantageous to the parties hereto;

NOW, THEREFORE, it is hereby mutually agreed as follows:

*1. The agencies shall furnish, or cause to be furnished, to the State, records of measurements of streamflow of Kaweah River and of diversion and distribution of water therefrom in Kaweah River Delta, for the period from October 1, 1960, to September 30, 1974, inclusive.

2. The agencies, upon their execution of this agreement, shall deposit with the State the sum of $20,000 for expenditure by the State in performing work provided for in this agreement. Each of the agencies shall contribute to the total amount deposited with the State as follows: Kaweah Delta Water Conservation District, 60 percent of the total in the amount of $12,000.00; Kaweah River Association, 20 percent of the total in the amount of $4,000.00; St. Johns River Association, 20 percent of the total in the amount of $4,000.00.

3. The State, at the earliest practicable date, shall compile, edit, and print, in the form of a bulletin, said records together with the necessary and appropriate maps and other pertinent data for said period.

4. The State shall supply each agency with 150 copies of the printed bulletin upon its completion.

*5. The State shall under no circumstances be obligated to expend for or on the account of the work provided for under this agreement any funds in excess of the amount made available under this agreement, and if said funds are exhausted before completion of the work, the State may discontinue the work and shall not be liable or responsible for the completion thereof.

6. Upon the completion of the work, the State shall furnish to the agencies a statement of expenditures, and any unexpended or unobligated balance in the deposit made by the agencies shall be returned to them for distribution in proportion to their contribution.

IN WITNESS WHEREOF, the parties hereto have executed this agreement as of the date hereof.

AMENDMENT TO AGREEMENT NO. 161535

Page 1, Item 1, Line 25, amended to read October 1, 1960, to September 30, 1970.

This amendment to become a part of original agreement dated January 13, 1975.

Reference to:

Page 2, Item 5, Lines 11 through 17

Original allocation of $20,000 insufficient to cover expenditure of compiling, editing, typing, and printing of data.

Augmentation in the amount of $4,000 requested to cover printing cost.

ACKNOWLEDGMENT

All records of streamflow of the Kaweah River (except the discharge of the Kaweah River at Three Rivers, South Fork Kaweah River near Three Rivers, Dry Creek near Lemon Cove, and Lemon Cove Ditch, which were obtained from the U. S. Geological Survey publication) and the diversion, distribution and storage of water in Terminus Reservoir were furnished in annual report form by the St. Johns River Association and the Kaweah River Association.

Mr. Leon J. Chrisman, Watermaster — Civil Engineer

Mr. Max Garver, Assistant Watermaster — Civil Engineer

INTRODUCTION

The Kaweah River drains a watershed on the western slope of the Sierra Nevada in Tulare County adjoining that of the Kings River on the north and the Tule River on the south, and extending on the east to a secondary ridge parallel to the main ridge of the Sierra Nevada called the Great Western Divide which separates the Kaweah Basin from that of the upper Kern River. The headwaters rise in glacial lakes along the divide near Triple Divide Peak, elevation 12,651 feet. The main stream is formed near the town of Three Rivers, about 10 miles above the head of its delta, by the confluence of the North, Middle, and South Forks. West of the foothills, the river divides into several distributaries which cross the delta fan and enter Tulare Lake. The basin above the lower edge of the foothills is about 26 miles long with an average width of about 20 miles.

The drainage area on the Kaweah River watershed above the U. S. Geological Survey gaging station near Three Rivers is 418 square miles.

The existing major developments on the Kaweah River above Three Rivers consist of three power plants of the Southern California Edison Company, Kaweah No. 1, No. 2, and No. 3, having installed capacities of 2,500, 3,500, and 3,500 KVA (kilovolt amperes), respectively. The water supply for Kaweah No. 1 is diverted from the East Fork, Kaweah No. 3 diverts near the junction of the Marble Fork and Middle Fork, and diversion for Kaweah No. 2 is made from the Middle Fork immediately below the tailrace of Kaweah No. 3. These plants operate principally upon unregulated streamflow which does not materially alter the regimen of the stream below Three Rivers. The minor irrigation development along the Kaweah River above the head of its delta occurs mainly in the vicinity of Three Rivers and extends a few miles up each fork. Water required for the irrigation of citrus and deciduous orchards in this area, aggregating approximately 1,000 acres, is diverted through a series of ditches of small capacity.

Lands with irrigation service from the Kaweah River are situated within a gross area of approximately 600 square miles on the easterly slope of the San Joaquin Valley, extending some 20 miles north and south and 30 miles east and west. The northerly and westerly boundaries of the area coincide, in general, with the southerly boundary of the Alta and Ivanhoe Irrigation Districts and the easterly boundary of the Peoples Ditch Company of the Kings River service area. The area is bounded approximately on the east by the Exeter and Lindmore Irrigation Districts, and on the south by the northerly boundary

of the Lower Tule River Irrigation District and the southern portion of Corcoran Irrigation District. The extent of the gross area may be roughly outlined by lines joining the towns of Lemon Cove, Woodlake, Traver, and Hanford on the north; Hanford, Guernsey, and Waukena on the west; Waukena and Strathmore on the south; and Strathmore, Exeter, and Lemon Cove on the east. The cities of Visalia and Tulare are situated near the center of the main Kaweah River delta area which extends southwesterly from its head near Lemon Cove to the town of Waukena near the Tulare-Kings County line. Most of the areas served are organized as mutual water companies, ditch companies, and irrigation districts. About 1-1/4 miles west of Lemon Cove at McKay Point, the Kaweah River divides into the St. Johns and Kaweah Branches, the former traversing the northern portion of the main delta, and the latter the central and southern portions.

Gross areas entitled to the use of surface diversions from the Kaweah River aggregate approximately 270,500 acres. The diversions by individual canals are governed by their relative rights and priorities which have been established through appropriation, historical use, court decisions, and stipulations. The larger and more dependable part of the streamflow is diverted mainly through canals which head east of Visalia.

The construction of storage facilities included in the Terminus Dam Project, as authorized by the Flood Control Act of 1944, Public Law No. 534 (78th Congress, Second Session), was completed in May 1962, and a number of parties participated in benefits of storage provided by the project under a contract dated January 11, 1965, by and between the United States of America and Kaweah Delta Water Conservation District.

This report presents records of all available measurements of streamflow of the Kaweah River, canal diversions, Central Valley Project deliveries, and storage of water in Terminus Reservoir for the period October 1, 1960, to September 30, 1970. These records were furnished by the St. Johns River Association and the Kaweah River Association in annual report form for compilation in this Bulletin No. 49D.

Data in this bulletin are presented in three parts: Appendix A presents streamflow data; Appendix B presents canal diversion data for the Lower Kaweah River, St. Johns River, and Central Valley Project deliveries; and Appendix C presents storage operation data for the various entities, and operation pool storage.

APPENDIX A

STREAMFLOW RECORDS

INTRODUCTION

This appendix presents surface water data for the period October 1, 1960, to September 30, 1970. The data consist of mean daily discharge in cubic feet per second, monthly maximum and minimum flow in cubic feet per second, monthly acre-feet and total acre-feet for the year for each station.

Records were collected by the U. S. Geological Survey, U. S. Corps of Engineers, U. S. Bureau of Reclamation, the St. Johns River Association, and the Kaweah River Association.

Data presented herein were furnished in annual report form by the St. Johns River Association and the Kaweah River Association and published as received and are not necessarily rounded to the criteria of the Department of Water Resources. Station titles published herein may vary from those used in some of the annual reports from which the data were compiled. Examples: Hawkeye Ditch was published in the annual reports as Dofflemyer, and Cottonwood Creek near Elderwood was published as above Highway 65 and also above Highway 69.

Due to variation in titles used in the annual reports, a list of official titles for use in this report was furnished by the St. Johns River Association and the Kaweah River Association.

TABLE A-1

KAWEAH RIVER AT THREE RIVERS

Location - Latitude 36°26'38", longitude 118°54'09", in southwest ¼, southwest ¼, Section 13, T17S, R28E, Tulare County, on right bank opposite schoolhouse in Three Rivers, 0.2 mile downstream from North Fork Kaweah River.

Drainage area - 410 square miles

Period of record - October 1958 to current year.

Gage - Water-stage recorder. Datum of gage is 809.62 feet above mean sea level.

Average discharge - 12 years. 525 cfs, 380,400 acre-feet per year.

Extremes - Period of record: maximum discharge, 73000 cfs December 5, 1966 (gage height, 16.69 feet in gage well, 19.0 feet from floodmarks), from rating curve extended above 13,000 cfs on basis of slope area measurements at gage heights 13.68 and 16.69 feet; minimum, 14 cfs September 9, 1959, October 16, 1961. Flood of December 23, 1955, reached a stage of 17.9 feet from floodmarks.

Remarks - Records good. Diversions for 200 acres above station. Power is developed on the Middle and East Fork Kaweah River.

TABLE A-2

SOUTH FORK KAWEAR RIVER AT THREE RIVERS

Location - Latitude 36°25'00", longitude 118°54'48", in southeast ¼ section 26 T17S, R28E, Tulare County, on right bank 200 feet upstream from unnamed tributary, 0.5 mile upstream from mouth and 1.8 miles southwest of Three Rivers

Drainage Area - 86.7 square miles

Period of record - October 1958 to current year

Gage - Water-stage recorder. Datum of gage is 807.22 feet above mean sea level.

Extremes - Period of record - Maximum discharge, 11,600 cfs December 6, 1966 (gage height, 9.30 feet in gage well, 10.4 feet from floodmarks), from rating curve extended above 2,600 cfs on basis of slope-area measurement of maximum flow; no flow at times in 1960-62.

Flood of December 23, 1955, reached a stage of 9.5 feet from floodmarks (discharge, 10,000 cfs).

Remarks - Records good. Several small diversions above station for irrigation.

TABLE A-3

DRY CREEK NEAR LEMONCOVE

LOCATION: Latitude 36°26'51", longitude 119°01'38", in northeast quarter, southeast quarter, Section 15, Township 17 South, Range 27 East, Tulare County, on right bank 0.5 mile downstream from Bequette Canyon, 2.9 miles upstream from mouth, and 4.4 miles north of Lemoncove.

DRAINAGE AREA: 75.6 square miles

PERIOD OF RECORD: October 1959 to current year

GAGE: Water-stage recorder. Altitude of gage is 570 fmet (from topographic map). Prior to March 8, 1969, 1.6 miles downstream at different datum.

AVERAGE DISCHARGE: 13 years, 19.7 cfs (14,270 acre-feet per year); median of yearly mean discharges, 7.0 cfs (5,100 acre-feet per year).

EXTREMES: Period of record - maximum discharge, 14,500 cfs December 6, 1966 (gage height, 7.30 feet in gage well, 8.94 feet, from floodmarks, site and datum then in use); no flow for several months in each year.

Flood of December 23, 1955, reached a discharge of 6,070 cfs from slope area measurement. Flood of 1867 is believed to have exceeded that of December 1955, from information by local residents.

REMARKS: Records good. Small diversions above station for irrigation.

(Records furnished by U. S. Geological Survey)

TABLE A-5

SAND CREEK EAST OF ORANGE COVE

Location: Latitude 36° 37' 36", longitude 119° 14' 48", in SE¼, NW¼ Sec. 15, T. 15S, R.25E, Tulare County, on right bank 3.8 miles east of Orange Cove.

Drainage Area: 31.6 sq. miles

Period of Record: October 1944 to September 30 current year.

U.S.G.S. Operated Station 1944 - 1954.

U.S.B.R. operated station 1955 - 1967.

K.D.W.C.D. operated station 1968 to current year.

Maximum discharge since 1944, 3,520 cfs January 25, 1969

Gage Height: 8.75 ft. from floodmarks

Remarks: Records good. No regulation or diversion above station

TABLE A-7

LEMONCOVE DITCH BELOW TERMINUS DAM

Location - Latitude 36°24'55", longitude 119°00'22", in southwest ¼, southwest ¼, Section 25, Township 17 south, Range 27 east, Tulare County, on left bank 250 feet downstream from outlet tunnel of Terminus Dam and 2.4 miles northeast of Lemoncove.

Period of record - June 1962 to current year

Gage - Water stage recorder and Parshall flume. Datum of gage is 546.3 feet above mean sea level (levels by Corps of Engineers).

Average discharge - 8 years, 4.96 cfs (3,598 acre-feet per year)

Extremes - Period of record: maximum daily discharge, 8.8 cfs May 5, 1970; no flow many days in 1962, 1969

Remarks - Records excellent

TABLE A-8

FOOTHILL DITCH

Point of diversion - Three miles above McKay Point on south bank of Kaweah River in the southeast quarter of Section 26, Township 17 South, Range 27 East, M.D.B. and M.

Maximum diversion capacity - 20 second-feet

Location of gaging station - One-half mile below head of ditch in northwest quarter of Section 35, Township 17 South, Range 27 East, M.D.B. and M.

Description of gaging station - Weir installed July 29, 1917; replaced by Parshall flume April 1, 1936. Water stage recorder in continuous operation since 1936.

Operating agency - Foothill Ditch Company

Gross service area - 2,150 acres

Period of record - 1917 to 1970; no records during 1919; intermittent during 1917, 1918, 1920, 1924, 1925, and 1926; continuous from March 23, 1921, to February 9, 1924, and from May 8, 1926, to current year.

Remarks - Does not include water transferred to Tulare County Recreation Pool shown in table A9.

TABLE A-10

WUTCHUMNA DITCH

Point of diversion - Above McKay Point on north bank of Kaweah River in the southeast quarter of Section 34, Township 17 South, Range 27 East, M.D.B. and M.

Maximum diversion capacity - 300 second-feet

Location of gaging station - Three-tenths of a mile below head of ditch in southeast quarter of Section 34, Township 17 South, Range 27 East, M.D.B. and M.

Description of gaging station - Rated concrete control structure, checked frequently by means of current meter measurements prior to installation of 12-foot Parshall flume completed in February 1954.

Operating agency - Wutchumna Water Company

Gross service area - 10,500 acres, exclusive of areas included in Lindsay-Strathmore and Tulare Irrigation Districts.

Period of record - 1917 to 1970; intermittent from January 12, 1917, to February 16, 1920; continuous from February 16, 1920, to September 30, 1970.

TABLE A-11

KAWEAH RIVER AT MCKAY POINT TOTAL FLOW

Location of gaging station - Southeast quarter of Section 4, Township 18 South, Range 27 East, M.D.B and M., at point of bifurcation of Kaweah River into St. Johns and Kaweah Branches.

Owner of gaging station - Kaweah River and St. Johns River Associations

Description of gaging station - A broad-crested weir consisting of two sections, each 113.6 feet in length, with the same crest elevations, one section crossing the head of each branch; a water stage recorder above the weir on the south bank of the river; a cableway and car about 100 yards upstream; and a controlled by-pass structure at the south end of the Kaweah Branch weir section. The crest of the weir section crossing St. Johns Branch is equipped with flashboards to make possible the diversion of the entire low flow into the Kaweah Branch. An accurate relationship has been established between water levels at the recorder and flows over each of the weir sections. Since 1940 a radio stream gage has been in continuous operation.

Period of record - 1916 to December 23, 1955, and from September 30, 1958 to current year

TABLE A-12

LOWER KAWEAH RIVER BELOW
MCKAY POINT

Location of gaging station - Southeast quarter of Section 4, Township 18 South, Range 27 East, M.D.B. and M., at point of bifurcation of Kaweah River into St. Johns and Kaweah Branches.

Owner of gaging station - Kaweah River and St. Johns River Associations

Description of gaging station - A broad-crested weir consisting of two sections, each 113.6 feet in length, with the same crest elevations, one section crossing the head of each branch; a water stage recorder above the weir on the south bank of the river; a cableway and car about 100 yards upstream; and a controlled by-pass structure at the south end of the Kaweah Branch weir section. The crest of the weir section crossing St. Johns Branch is equipped with flashboards to make possible the diversion of the entire low flow into the Kaweah Branch. An accurate relationship has been established between water levels at the recorder and flows over each of the weir sections. Since 1940 a radio stream gage has been in continuous operation.

Period of record - 1916 to December 23, 1955, and from September 30, 1958 to current year. In fall of 1964, a Trenton-type artificial control was constructed downstream on each branch of the Kaweah River below the bifurcation, and a water stage recorder was installed for obtaining continuous flow records.

TABLE A-13

ST. JOHNS RIVER BELOW MCKAY POINT

Location of gaging station - Southeast quarter of Section 8, Township 18 South, Range 27 East, M.D.B. and M., at point of bifurcation of Kawsah River into St. Johns and Kawsah Branches.

Owner of gaging station - Kawsah River and St. Johns River Associations

Description of gaging station - A broad-crested weir consisting of two sections, each 113.6 feet in length, with the same crest elevations, one section crossing the head of each branch; a water stage recorder above the weir on the south bank of the river; a cableway and car about 100 yards upstream; and a controlled by-pass structure at the south end of the Kawsah Branch weir section. The crest of the weir section crossing St. Johns Branch is equipped with flashboards to make possible the diversion of the entire low flow into the Kawsah Branch. An accurate relationship has been established between water levels at the recorder and flows over each of the weir sections. Since 1940 a radio stream gage has been in continuous operation.

Period of record - 1916 to current year

In fall of 1964, a Trenton-type artificial control was constructed downstream on each branch of the Kawsah River below the bifurcation, and a water stage recorder was installed for obtaining continuous flow records.

APPENDIX B

CANAL DIVERSIONS AND CENTRAL VALLEY PROJECT DELIVERIES

INTRODUCTION

This appendix presents diversion data from the Lower Kaweah River, St. Johns River, and Central Valley Project deliveries to the various canal systems within the service area for the period October 1, 1960, to September 30, 1970. The data consist of mean daily diversions in cfs, maximum and minimum monthly discharge in cfs, monthly acre-feet, and total acre-feet for the year.

Diversions made during the period covered by this report were made under an interim schedule established after completion of Terminus Dam in May 1962, at which time an interim contract between the U. S. Corps of Engineers and downstream interests was initiated for storage in Terminus Reservoir.

This report presents only amounts of diversion data and makes no attempt to report any criteria used in determining entitlements or amounts to be diverted.

Data presented in this appendix were furnished in annual report form by the St. Johns River Association and the Kaweah River Association, and published as received except that titles of some ditches or diversion points may vary from that which was published in some of the annual reports from which these data were compiled.

TABLE B-1

HAMILTON DITCH

Point of diversion - Two and one-half miles below McKay Point on south bank of Kaweah Branch in northeast quarter of Section 7, Township 18 South, Range 27 East, M.D.B. and M., prior to 1945. In 1945, a pump was installed 3 miles below McKay Point on south bank of Kaweah Branch in southeast corner of Section 12, Township 18 South, Range 26 East, M.D.B. and M. In 1954, a ditch was constructed with head 1 mile below McKay Point on south bank of Kaweah River in southeast quarter of Section 12, Township 18 South, Range 27 East.

Location of gaging station - Three-fourths of a mile below head of ditch in northwest quarter of Section 18, Township 18 South, Range 27 East, M.D.B. and M., prior to 1945. From 1945 to 1954 occasional measurements of pump were made. Since 1955 station located at head of ditch in southeast quarter of Section 12, Township 18 South, Range 27 East.

Description of gaging station - Rated channel and staff gage

Operating agency - Individual landowners

Gross service area - 340 acres

Period of record - 1920, 1930, inclusive; no record for 1923; 1961 to current year

TABLE B-3

CONSOLIDATED PEOPLES DITCH

Point of diversion - Four and one-half miles below McKay Point on the south bank of Kassah Branch in the northeast quarter of Section 14, Township 18 South, Range 26 East, M.D.B & M.

Maximum diversion capacity - 700 second-feet

Location of gaging station - At head of ditch in the northeast quarter of Section 14, Township 18 South, Range 26 East, M.D.B. & M.

Description of gaging station - Concrete headgate and flashboards, rated by current meter measurements from footbridge below headgate. Water stage recorder above headgate. Parshall flume installed September 1954.

Operating agencies - Consolidated Peoples Ditch Company and Elk Bayou Ditch Company

Gross service areas - Consolidated Peoples Ditch Company, 16,000 acres. Elk Bayou Ditch Company, 8,900 acres.

Period of record - April 15, 1917 to current year

TABLE B-5

DEEP CREEK

Point of diversion - Six and five-eighths miles below McKay Point on the south bank of Kaweah Branch in the southwest quarter of Section 22, Township 18 South, Range 26 East, M.D.B. and M.

Maximum diversion capacity - 500 second-feet

Location of gaging station - Prior to 1925, three-eighths of a mile below head of creek in the southeast quarter of Section 21, Township 18 South, Range 26 East, M.D.B. and M. Since 1925, 100 yards below head of creek in same section.

Description of gaging station - Open channel section, staff gage and water stage recorder rated frequently by current meter measurements from a footbridge

Operating agencies - Farmers Ditch Company and Tulare Irrigation District

Gross service areas - Farmers Ditch Company, 12,500 acres; Tulare Irrigation District, 75,350 acres

Period of record - 1917 to current year; intermittent from April 7, 1917, to July 31, 1918, and from October 1, 1919, to April 19, 1920; continuous from April 19, 1920, to current year

TABLE B-7

TULARE IRRIGATION COMPANY CANAL

Point of diversion - Eight and one-half miles below McKay Point on the south bank of Kaweah Branch in the northeast quarter of Section 20, Township 18 South, Range 26 East, M.D.B. and M.

Maximum diversion capacity - 140 second-feet

Location of gaging station - 300 feet below head of canal in the northeast quarter of Section 20, Township 18 South, Range 26 East, M.D.B. and M.

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements prior to installation of 10-foot Parshall flume in 1957

Operating agency - Tulare Irrigation Company

Gross service area - 7,300 acres

Period of record - Continuous from May 1, 1917, to September 30, 1918; no record for water year ending September 30, 1919; intermittent during 1920 prior to April 13, but continuous after April 13 to September 30, 1921; no records from October 1, 1921 to September 30, 1923; continuous from October 1, 1923 to current year

* Includes water from Katchum Ditch

TABLE B-9

FLEMING DITCH

Point of diversion - Nine and one-half miles below McKay Point on the north bank of Kawesh Branch in the northeast quarter of Section 19, Township 18 South, Range 26 East, W.D.B. and M.

Maximum diversion capacity - 26 second-feet

Location of gaging station - 300 feet below head of canal in the northeast quarter of Section 19, Township 18 South, Range 26 East, W.D.B. and M., map designation 13

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements prior to installation of 5-foot Parshall flume in 1959

Operating agency - Fleming Ditch Company

Gross service area - 1,700 acres

Period of record - 1917 to current year; intermittent during 1917 and 1920; no record during 1919 and 1923; continuous from April 13, 1920, to September 30, 1922, and from October 1, 1923, to current year

* Includes water from Ratchum Ditch

TABLE B-10

PACKWOOD CREEK FROM LOWER KAWEAH RIVER

Point of diversion - Eleven and one-quarter miles below McKay Point at the point of bifurcation of the Kaweah Branch into Packwood and Mill Creeks in the northwest quarter of Section 25, Township 18 South, Range 25 East, M.D.B. and M.

Maximum diversion capacity - 455 second-feet

Location of gaging station - Prior to 1940, 1 mile below head of creek in the southeast quarter of Section 26, Township 18 South, Range 25 East, M.D.B. and M. From 1940 to 1954, three-quarters of a mile below the head of creek in same section. After 1954, 100 yards below head of creek near the west line of the northwest quarter of Section 25, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements prior to installation of 15-foot Parshall flume in September 1954

Operating agency - Packwood Canal Company through 1948; Tulare Irrigation District thereafter

Gross service area - 15,000 acres

Period of record - 1918 to current year; intermittent during the years ending September 30, 1919, and 1925; no records for the year ending September 30, 1923; continuous from October 1, 1917, to September 30, 1918, from October 1, 1919, to September 30, 1922, from October 1, 1923, to September 30, 1924, and from October 1, 1925, to current year

TABLE B-11

OAKES DITCH

Point of diversion - 11-1/2 miles below McKay Point on the south bank of Mill Creek in the northwest quarter of Section 25, Township 18 South, Range 25 East, M.D.B. and M.

Maximum diversion capacity - 30 second-feet

Location of gaging station - Prior to April 1940, one-half mile below head of ditch in southeast quarter of Section 26, Township 18 South, Range 25 East, M.D.B. and M. From 1940 to 1958, near the center of Section 26. After 1958, 30 feet below the head of ditch near the east line of Section 26, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements prior to 1930. A Venturi meter installed in 1930 and destroyed in the flood of December 1937 has not been replaced. From April 1940 to the fall of 1958, measurements were made by means of a water stage recorder located above a concrete weir. Since 1958, measurements have been made by means of a 5-foot Parshall flume.

Operating agency - Oakes Ditch Company

Gross service area - 1,200 acres

Period of record - 1917 to 1937; 1940 to 1970; intermittent during 1917 and 1918; no records during the years ending September 30, 1919, 1923, 1938, and 1939; continuous from April 16, 1920, to September 30, 1922, and from October 1, 1923, to September 30, 1937; continuous from April 18, 1940, to current year. Includes water from Ratchum Ditch for Visalia and Raweah Water Company.

TABLE B-12

EVANS DITCH

Point of diversion - Thirteen miles below McKay Point on the south bank of Mill Creek in the southeast quarter of Section 27, Township 18 South, Range 25 East, M.D.B. and M.

Maximum diversion capacity - 72 second-feet

Location of gaging station - One-half mile below head of ditch in southwest quarter of Section 27, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - A concrete weir 10 feet long across the head of Evans Ditch and a staff gage and water stage recorder above the weir. An accurate relationship has been established between water level at the recorder and flow over the weir.

Operating agencies - Evans Ditch Company

Gross service area - 4,250 acres

Period of record - 1917 to 1970; intermittent during the years ending September 30, 1917, and 1918; no record during the year ending September 30, 1919; continuous from October 1, 1919 to current year

Includes water from Ketchum Ditch for Visalia and Kaweah Water Company

TABLE B-13

MILL CREEK (LOWER KAWEAH RIVER)

Point of diversion - The first 40 second-feet of flow measured at this station is diverted into Persian Ditch, which heads on the south bank of Mill Creek five miles below the gaging station and nineteen miles below McKay Point in the southwest quarter of Section 26, Township 18 South, Range 24 East, M.D.B. and M.

Maximum diversion capacities - Mill Creek, 440 second-feet. Persian Ditch, 80 second-feet.

Location of gaging station - On Mill Creek fourteen miles below McKay Point in the southwest quarter of Section 27, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - A timber trapezoidal control section with staff gage and water stage recorder, rated by frequent current meter measurements, prior to installation of 15 foot Parshall Flume in 1958.

Operating agency - Persian Ditch Company.

Gross service area - 6,300 acres.

Period of record - 1917 to 1970; intermittent during the years ending September 30, 1917 and 1918; no record during the years ending September 30, 1919, 1923, and 1956; continuous from October 1, 1919, to September 30, 1922 and from October 1, 1923 to current year.

Remarks - Includes water from Ketchum Ditch for Visalia Kaweah Water Company shown as Ketchum Ditch (a) Table B-21

TABLE 8-15

NORTH BRANCH PERSIAN DITCH

Point of diversion - Near northeast corner of Section 34, Township 18 South, Range 24 East, M.D.B. and M.

Maximum diversion capacity - 70 second-feet

Location of gaging station - Approximately 100 feet west of main Persian Ditch.

Description of gaging station - Open channel section with water stage recorder and gaging bridge for current meter measurements

Operating agency - Persian Ditch Company

Gross service area - 3,300 acres

Period of record - Beginning 1960 to current year

Criteria for diversions - Arbitrary; all or part of the entitlement of Persian Ditch Company may be taken down this branch.

TABLE B-16

WATSON DITCH

Point of diversion - Prior to 1960, 13 miles below McKay Point on the south bank of Mill Creek in the southeast quarter of Section 27, Township 18 South, Range 25 East, M.D.B. and M. After 1960, located 1,000 feet south of the northeast corner of the northwest quarter of the southeast quarter of Section 34, Township 18 South, Range 24 East, M.D.B. and M.

Maximum diversion capacity - Prior to 1960, 72 second-feet; after 1960, 60 second-feet.

Location of gaging station - Prior to 1960, one-half mile below head of ditch in southwest quarter of Section 27, Township 18 South, Range 25 East, M.D.B. and M. After 1960, station located in the southeast quarter of Section 34, Township 18 South, Range 24 East, M.D.B. and M.

Description of gaging station - Prior to 1960, a concrete weir consisting of two sections, each 10 feet in length, with the same crest elevations, one across the head of Evans Ditch and the other across the head of Watson Ditch, and a staff gage and water stage recorder above the weir. Since 1960, an open channel section has been used with staff gage and water stage recorder, rated by frequent current meter measurements.

Operating agencies - Prior to 1960, Evans and Watson Ditch Companies; after 1960, Watson Ditch Company

Gross service area - Prior to 1960, 3,925 acres; after 1960, approximately 3,800 acres

Period of record - 1917-1970 intermittent during the years ending September 30, 1917 and 1918; no record during the year ending September 30, 1919; continuous from February 23, 1920 to September 30, 1970.

TABLE B-18

LONGS CANAL

Point of diversion - One and one-quarter miles below McKay Point on the south bank of St. Johns Branch in the southeast quarter of Section 5, Township 18 South, Range 27 East, M.D.B. and M.

Maximum canal capacity - 20 second-feet pump capacity

Location of gaging station - 500 feet below head of canal in the southeast quarter of Section 5, Township 18 South, Range 27 East, M.D.B. and M., prior to December 1937, and since 1937 measurements at the pump itself on the river bank

Description of gaging station - Open channel section, staff gage, and water stage recorder rated by frequent current meter measurements prior to the flood of December 1938 when diversion works and gaging station were destroyed. Since that time, diversions and measurements have been made by means of a rated low head electrically driven pumping plant of 20 second-feet capacity.

Operating agency - Individual landowners

Gross service area - 880 acres

Period of record - 1922 to current year; intermittent during the years ending September 30, 1922, 1924, 1926, 1927, and 1931; no record during the years ending September 30, 1923, 1928, 1929, and 1930; continuous from October 1, 1924, to September 30, 1925, and from February 19, 1931, to September 30, current year.

TABLE B-21

KETCHUM DITCH AT HEAD

Point of diversion - Five miles below McKay Point on the south bank of St. Johns Branch in the northeast quarter of Section 11, Township 18 South, Range 26 East, M.D.B. and M.

Maximum diversion capacity - 125 second-feet

Location of gaging station - 500 feet below head of ditch in the northeast quarter of Section 11, Township 18 South, Range 26 East, M.D.B. and M.

Description of gaging station - Open section, staff gage and water stage recorder rated by frequent current meter measurements prior to installation of Parshall flume in December 1936

Operating agencies - Visalia and Kaweah Water Company, Tulare Irrigation Company, and Tulare Irrigation District

Gross service area - Visalia and Kaweah Water Company, 18,300 acres; Tulare Irrigation Company, 7,300 acres; Tulare Irrigation District, 75,350 acres.

Period of record - 1917 to current year; intermittent during the years ending September 30, 1920, and 1924; no record during the years ending September 30, 1919, 1921, 1922, and 1923; continuous from May 1, 1917, to September 30, 1918, and from October 1, 1924, to current year

Remarks - The following tables list mean daily diversions of Ketchum Ditch from the St. Johns River which include deliveries for Visalia and Kaweah Water Company and for Tulare Irrigation Company.

Notes: Ketchum Ditch at head is total flow.

Ketchue Ditch (a) water to Visalia and Kaweah Water Company: This water transferred to Kaweah River and diverted by Fleming, Oakes, Evans, Watson and Peraian Ditches.

Ketchum Ditch (b) water for Tulare Irrigation Company: This water transferred to Kaweah River and diverted by Tulare Irrigation Company.

TABLE B-22

PACKWOOD CANAL FROM ST. JOHNS RIVER

Point of diversion - Five and one-half miles below McKay Point on the south bank of St. Johns Branch in the northeast quarter of Section 10, Township 18 South, Range 26 East, M.O.B. and M.

Maximum diversion capacity - 300 second-feet

Location of gaging station - Two miles below head of canal in the northwest quarter of Section 16, Township 18 South, Range 26 East, M.O.B. and M.

Description of gaging station - Open channel section through solid rock, staff gage and water stage recorder, rated by frequent current meter measurements.

Operating agency - Packwood Canal Company through 1948 and Tulare Irrigation District thereafter

Gross service area - 15,000 acres (served by Packwood Canal)

Period of record - 1917 to current year; no record during the years ending September 30, 1918, 1919, 1920, 1922, and 1923; partial record during 1921; continuous from May 1 to September 30, 1917, and from October 1, 1924, to current year

TABLE B-23

TULARE IRRIGATION DISTRICT FROM ST. JOHNS RIVER

Point of diversion - 6-1/2 miles below McKay Point on the north bank of St. Johns Branch in the northwest quarter of Section 10, Township 18 South, Range 26 East, M.D.B. and M.

Maximum diversion capacity - 500 second-feet

Location of gaging station - 2-1/4 miles below head of canal at the siphon crossing St. Johns Branch in the southeast quarter of Section 17, Township 18 South, Range 26 East, M.D.B. and M.

Description of gaging station - Prior to 1951 at flume section, with staff gage and water stage recorder, rated by frequent current meter measurements. Because of the shape of the flume entrance, it was in effect a Parshall flume with a constant rating. Since 1951 the gaging station has been at the entrance of the siphon across St. Johns River.

Operating agency - Tulare Irrigation District

Gross area of Tulare Irrigation District - Prior to January 1948, 33,500 acres; since October 1948, 75,350 acres

Period of record - 1917 to current year

Remarks: Quantities in this table do not include water received from Wutchuma Ditch nor water from the Central Valley Project also measured at this point which are shown on separate tables.

TABLE B-25

MATHEWS DITCH

Point of diversion - Twelve miles below McKay Point on the north bank of St. Johns Branch in the northeast quarter of Section 23, Township 18 South, Range 25 East, N.D.B. and M.

Maximum diversion capacity - 40 second-feet

Location of gaging station - One-quarter mile below head of ditch in the northwest quarter of Section 23, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements; replaced by Parshall flume in 1936. This was used through the 1936 season, then open channel section until December 1948 when a 42-inch Calco metergate was installed with a differential recorder just below head of ditch.

Operating agency - Mathews Ditch Company

Gross service area - 2,500 acres

Period of record - 1917 to current year; intermittent during the years ending September 30, 1920, 1937, and 1938; no record during the years ending September 30, 1918, 1919, and 1923; continuous from May 2 to September 30, 1917, October 1, 1920, to September 30, 1922, October 1, 1923, to September 30, 1936, and from October 1, 1938 to September 30, current year

TABLE B-26

JENNINGS DITCH

Point of diversion - Thirteen and one-half miles below McKay Point on the south bank of St. Johns Branch in the southwest quarter of Section 22, Township 18 South, Range 25 East, M.D.B. and M.

Maximum diversion capacity - 45 second-feet

Location of gaging station - One-half mile below head of ditch in the southeast quarter of Section 21, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - Open channel section, staff gage and water stage recorder rated by frequent current meter measurements. From 1939 to 1951, timber control rated by current meter with a water stage recorder in operation during seasons of diversion. A 6-foot Parshall flume was installed in the fall of 1951.

Operating agency - Jennings Ditch Company

Gross service area - 900 acres

Period of record - 1917 to current date; intermittent during the years ending September 30, 1918, and 1920; no record during the year ending September 30, 1919; continuous from May 3 to September 30, 1917, and from October 1, 1920, to current date.

TABLE B-27

UPHILL DITCH

Point of diversion - Fifteen miles below McKay Point on the north bank of St. Johns Branch in the northwest quarter of Section 21, Township 18 South, Range 25 East, W.O.B. and N.

Maximum diversion capacity - 60 second-feet

Location of gaging station - Prior to December 1939, 700 feet below head of ditch in the northwest quarter of Section 21, Township 18 South, Range 25 East, W.O.B. and N.; since December 1939, 100 yards below ditch head in same section.

Description of gaging station - Open channel, staff gage and water stage recorder rated by frequent current meter measurements; replaced by Parshall flume in 1938 which was used until December 1939; after December 1939, open channel section rated by current meter with a water stage recorder in operation. An 8-foot Parshall Flume was installed in 1958.

Operating agency - Uphill Ditch Company

Gross service area - 3,500 acres

Period of record - 1917 to current year; intermittent during the years ending September 30, 1918, and 1920; no record during the years ending September 30, 1919, and 1923; continuous from May 3 to September 30, 1917, October 1, 1920, to September 30, 1922, and April 12, 1924, to September 30, current year.

TABLE B-28

MODOC DITCH

Point of diversion - On the south bank of St. Johns Branch 15-1/2 miles below McKay Point in the northeast quarter of Section 20, Township 18 South, Range 25 East, M.D.B. and M.

Maximum diversion capacity - 70 second-feet

Location of gaging station - Four hundred feet below head of ditch in the northeast quarter of Section 20, Township 18 South, Range 25 East, M.D.B. and M.

Description of gaging station - Open channel, staff gage and water stage recorder rated by frequent current meter measurements; replaced by Parshall flume in 1938

Operating agency - Modoc Ditch Company

Gross service area - 6,525 acres

Period of record - 1917 to current year; intermittent during the year ending September 30, 1921; no record during the years ending September 30, 1919, 1922, and 1923; continuous from May 2, 1917, to September 30, 1918, October 1, 1919 to September 30, 1920, and October 1, 1923, to current year

TABLE B-29

ST. JOHNS DITCH

Point of diversion - Seventeen and one-half miles below McKay Point on the south bank of St. Johns River in the southwest corner of the northeast quarter of Section 18, Township 18 South, Range 25 East, M.O.B. and M.

Maximum diversion capacity - Approximately 15 second-feet

Location of gaging station - Approximately 50 feet below head of ditch.

Description of gaging station - Open channel section with water stage recorder with bridge for making current meter measurements

Operating agency - St. Johns Ditch Company

Gross service area - 950 acres

Period of record - 1958 to current year

Remarks - Diversion is usually made by means of a pump; occasionally when flow in the river is small, direct diversion is made. There are years when no diversions are made.

TABLE B-30

GOSHEN DITCH

Point of diversion - Nineteen and one-half miles below McKay Point on the south bank of St. Johns River near the southwest corner of the northeast quarter of Section 11, Township 18 South, Range 24 East, N.D.B. and M.

Maximum diversion capacity - Approximately 75 second-feet

Location of gaging station - Approximately 100 feet below head of ditch.

Description of gaging station - Open channel section with water stage recorder with bridge for making current meter measurements

Operating agency - Goshen Ditch Company

Gross service area - 3,550 acres

Period of record - 1958 to current year

TABLE B-32

LAKESIDE DITCH

Point of diversion - Thirty-three miles below McKay Point on the north branch of Ccoss Creek (a contiguation of St. Johns Branch of Kaweah River) in the northwest quarter of Section 19, Township 18 South, Range 23 East, M.D.B. and M.

Maximum diversion capacity - 475 second-feet

Location of gaging station - One-half mile below head of ditch in the northeast quarter of Section 24, Township 18 South, Range 22 East, M.D.B. and M.

Description of gaging station - Open channel, staff gage and water stage recorder rated by frequent current meter measurements. Parshall flume installed February 1966.

Operating agency - Lakeside Ditch Company

Gross service area - 26,300 acres

Period of record - 1917 to current year; no record during the year ending September 30, 1919; continuous from April 10, 1917, to September 30, 1918, and from October 1, 1919, to current year.

LAKESIDE DITCH
FROM VARIOUS SOURCES

Point of diversion - 33 miles below McKay Point on the north branch of Cross Creek (a continuation of St. Johns Branch of Kaweah River) in the northwest quarter of Section 19, Township 18 South, Range 23 East, M.D.B. and M.

Maximum diversion capacity - 475 second-feet

Location of gaging station - One-half mile below head of ditch in the northeast quarter of Section 24, Township 18 South, Range 22 East, M.D.B. and M.

Description of gaging station - Open channel, staff gage and water stage recorder, rated by frequent current meter measurements. Parshall flume installed February 1966.

Operating agency - Lakeside Ditch Company

Gross service area - 26,300 acres

CORCORAN IRRIGATION DISTRICT

Point of diversion - 41 miles below McKay Point near the northeast corner of Section 10, Township 20 South, Range 22 East, M.D.B. and M.

Location of gaging station - Approximately 150 yards south of and below the head of Lakeland Canal No. 2

Operating agency - Corcoran Irrigation District

Period of record - 1917 to current year

Remarks: Cross Creek is an extension of St. Johns Branch of the Kaweah River.

Water can be delivered to the Corcoran Irrigation District via Cross Creek, Lakeland Canal No. 2, and the Highline Canal from the Kaweah River, St. Johns Branch, and Kings River.

Central Valley Project water is also delivered via Cross Creek.

This table presents diversions to the Corcoran Irrigation District from all sources.

APPENDIX C

STORAGE OPERATIONS

INTRODUCTION

This appendix presents data on daily storage in Terminus Reservoir for the Kaweah Delta Water Conservation District, irrigation districts, and the various ditch companies within the Kaweah River service area for the period May 1962 to September 30, 1970.

Data presented in this appendix consist of daily in-storage, out-storage, evaporation, release adjustments, and adjusted storage in acre-feet for various entities within the service area.

Due to the tremendous amount of daily storage data accumulated for the period commencing in May 1962 when Terminus Dam was completed to September 30, 1970, it was necessary to devise some form in which to present the data that would hold the number of required pages to a minimum. The tables show daily values for each month or portion thereof that storage was being accumulated.

For some entities, there are years of no storage. Therefore, a table may show storage for 1962 and continue with storage for 1965.

Also shown are recreation storage for Tulare County and operation pool storage.

FOOTNOTES

a 240 acre-feet requested storage - other storage due to operational difficulties
b Exchanged with Consolidated Peoples
c Water borrowed from Tulare Irrigation District
d 858 acre-feet transferred to Tulare Irrigation District
e 224 acre-feet transferred to Kaweah Delta Water Conservation District
f 2187 acre-feet transferred to Tulare Irrigation District from Crocker Cut
g Transferred from Longe Canal
h Transferred to Tulare Irrigation District per letter of June 2, 1970

May 8, and 9 requested storage. May 10, 11, 12 water inadvertently stored due to operational difficulties.

a Water exchange with Consolidated Peoples Ditch
b Transferred from Farmers Ditch Company
c Transferred to Tulare Irrigation District from St. Johns River
d Transferred from Oakes Ditch Company
e Transferred from Packwood Canal
f Transferred from Lakeside Ditch Company
g Transferred from Tulare Irrigation District (at St. Johns)

FOOTNOTES

a 280 acre-feet sold to Modoc Ditch Company

b Diverted at Fisher Ranch

c Diverted at Ranna Ranch on Lower Kaweah River

d 789 acre-feet of this total diverted at Grant Pump

e Diverted at Grant Pump

f Transferred to Modoc Ditch Company

g 692.34 transferred to Operations Pool and 692.34 transferred to Modoc Ditch

h Transferred from Longe Canal
